STATEMENT OF DEFICIENCIES AND PLAN OF CORRECTION	(X1) PROVIDER/SUPPLIER/CLIA IDENTIFICATION NUMBER: 105751	(X2) MULTIPLE CONSTRUCTION A. Building B. Wing	(X3) DATE SURVEY COMPLETED 06/22/2026
NAME OF PROVIDER OR SUPPLIER Specialty Health and Rehabilitation Center		STREET ADDRESS, CITY, STATE, ZIP CODE 6984 Pine Forest Road Pensacola, FL 32526	
For information on the nursing home's plan to correct this deficiency, please contact the nursing home or the state survey agency.			
(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)		
F 0880 Level of Harm - Minimal harm or potential for actual harm Residents Affected - Few	Provide and implement an infection prevention and control program. Based on observations, interviews and record review, the facility failed to follow acceptable nationally accepted infection prevention and control standards including proper use of Personal Protective Equipment (PPE) to prevent the spread of infections by staff involved in direct resident care in 1 out 1 resident observed. (Resident #2)The findings include:On 06/22/2026 at approximately 8:53 AM, an observation of Resident #2 was performed. An Enhanced Barrier Precaution (EBP) sign was posted on the outside of his door. (Photographic evidence obtained). The resident's urinary catheter tubing was observed disconnected from the catheter port. A staff member notified Staff B, Licensed Practical Nurse (LPN), who arrived with the catheter drainage bag replacement. The nurse donned gloves; however, she did not don a gown despite an EBP sign posted on the resident's door. After opening the replacement drainage bag package, the nurse cleansed the catheter connection port with an alcohol swab prior to reconnecting the tubing. The nurse completed the task and performed hand hygiene afterwards.On 06/22/2026 at approximately 9:01 AM, an interview was conducted with Staff B. She confirmed that she did not wear the required personal protective equipment (PPE) and did not put on a gown while providing catheter care for Resident #2 on EBP. She stated that she forgot to follow the EBP precaution posted on the residence door. She acknowledged that PPE is used to help prevent the spread of infection.On 06/22/2026 at 9:01 AM, an interview was conducted with Staff A, Advanced Registered Nurse Practitioner (ARNP). She explained that it is her expectation that staff wear the appropriate PPE when providing care to residents on EBP to help prevent the spread of infection. She stated that PPE is required as a precautionary measure, and failure to wear the appropriate PPE could increase the risk of infection transmission to residents.On 06/22/2026 at approximately 1:20 PM, an interview was conducted with the Assistant Director of Nursing (ADON). She explained that infection prevention includes staff compliance with appropriate PPE during high contact resident care, including wounds, catheters, peg tubes (a flexible feeding tube surgically inserted through the abdominal wall directly into the stomach) and intravenous (IV) sites, to reduce the risk of infection transmission.On 06/22/2026 at approximately 1:57 PM, an interview was conducted with the Director of Nursing. She stated that it is her expectation for the staff to wear the appropriate PPE including the gown when providing care to patients on EBP precautions.A review of Resident #2 medical record revealed that EBP precautions were initiated on 06/08/2026 for urinary catheter (a flexible tube inserted into the bladder to drain urine) care and antibiotic therapy was ordered for cystitis (inflammation of the bladder) on 06/16/2026. Further review of the resident care plan revealed that the resident is at risk for Multi Drug Resistant Organisms (MDRO) requiring EBP due to foley catheter with interventions to change PPE after contact with the resident, post notification signs at the door, and provide PPE equipment in room before providing direct high contact care. (Photographic evidence obtained)The facility policy titled Isolation Precautions, Categories of dated June 2025 states, Enhanced Barrier Precautions or to be used with multi drug resistant Organism. EBP Expand the use of PPE beyond situation in which exposure to blood and body fluids is anticipated and referred to the use of gown and gloves during high contact resident care activities to provide opportunities or transfer of multidrug resistant Organisms (MDRO) to staff hands and clothing. All residents with any of the following conditions should use EBP, including wounds and/or indwelling (continued on next page)		

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.
