STATEMENT OF DEFICIENCIES AND PLAN OF CORRECTION	(X1) PROVIDER/SUPPLIER/CLIA IDENTIFICATION NUMBER: 145843	(X2) MULTIPLE CONSTRUCTION A. Building B. Wing	(X3) DATE SURVEY COMPLETED 06/22/2026
NAME OF PROVIDER OR SUPPLIER Miller Health Care Center		STREET ADDRESS, CITY, STATE, ZIP CODE 1601 Butterfield Trail Kankakee, IL 60901	
For information on the nursing home's plan to correct this deficiency, please contact the nursing home or the state survey agency.			
(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)		
F 0686 Level of Harm - Minimal harm or potential for actual harm Residents Affected - Few	Provide appropriate pressure ulcer care and prevent new ulcers from developing. **NOTE- TERMS IN BRACKETS HAVE BEEN EDITED TO PROTECT CONFIDENTIALITY** Based on observations, interviews, and record review, the facility failed to ensure that a resident did not develop an avoidable pressure injury from wearing an abdominal binder. This applies to 1 of 4 residents (R4) reviewed for Quality of Care/Treatment in a sample of 4. The findings include: R4's EMR (Electronic Medical Record) showed R4 was admitted to the facility on [DATE]. The EMR showed that R4 had multiple diagnoses, including unspecified dementia, personal history of traumatic brain injury, gastrostomy status, epileptic seizures related to external causes, not intractable, with status epilepticus, functional quadriplegia, constipation, sepsis unspecified organism, type 2 diabetes mellitus, and heart failure unspecified, R4's MDS (Minimum Data Set) dated June 7, 2026, showed R4 had cognitive impairment, required maximum assistance with personal hygiene, and was dependent on staff for toileting and bathing. R4's POS (Physician Order Set) dated March 4, 2026, showed an order for Abdominal binder: resident must wear abdominal binder at all times, every shift to keep g-tube (gastrostomy tube) secure, every shift. On June 22, 2026, V2 (Director of Nursing/DON) and V3 (Assistant Director of Nursing/ADON) said the residents receive showers or bed baths once or twice weekly, and that the Certified Nursing Assistants/CNAs report any observed skin abnormalities to the nurses. V2 and V3 also said the nurses perform G-tube care every shift and as needed. V2 said nurses are expected to perform skin inspections beneath R4's abdominal binder during G-tube care every shift. V2 said she was confident the nursing staff was checking R4's armpits when they put the abdominal binder on R4. V2 said the nurses had to lift up R4's arms to place the abdominal binder, and the nursing staff would have seen if R4 had any skin breakdown in his armpits. R4's bed bath sheet documentation for May and June 2026 was reviewed. No abnormal skin condition was documented by the nursing staff. R4's last documented bed bath sheet before his transfer to the hospital on June 8, 2026, was on June 2, 2026. R4's care plan showed that R4 required tube feeding due to the diagnosis of dysphagia. Care plan interventions documented on January 13, 2026, included the resident wears an abdominal binder at all times. Ensure applied correctly and snugly. Check skin under binder daily for irritation, redness, or breakdown. As of June 22, 2026, there was no documentation to show that the skin under the abdominal binder, including R4's armpits, was checked after June 2, 2026. R4 was transferred to the ED on June 8, 2026, at approximately 1:08 AM according to the nursing progress note. R4's hospital wound care progress note dated June 8, 2026, at 9:49 AM showed, Consultation for wound care to see wound bilateral underarms present on admission. patient noted with a large abdominal binder applying pressure to his underarms. Wound 1 Pressure Injury Axilla Right: Shape: linear. Measurement: 1.2 cm (centimeters) by 3.5 cm by 1.7 cm (Length by Width by Depth), odor: none, Pressure Injury Stage: 3. Wound 2: Pressure Injury Axilla Left. Shape: linear. Measurement: 1.6 cm (centimeters) by 4.4 cm by 0.7 cm (L by W by D), odor: none, Pressure Injury Stage: 3. R4 returned to the facility on June 10, 2026. On June 22, 2026, at 10:44 AM, V4 (Wound Care Nurse) said V4 R4 was not being seen by the wound care team for any wounds prior to R4's hospitalization on June 8, 2026. V4 said she found out that R4 had wound to his bilateral axilla after R4 returned from the hospital on June 10, 2026. V4 said she assessed the resident's wound for the first time on June 11, 2026. V4 said wounds can develop very quickly due to moisture and other risk factors. V4 said she (continued on next page)		

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)		
F 0686 Level of Harm - Minimal harm or potential for actual harm Residents Affected - Few	could not say for sure if R4 had something starting in his armpit to have developed stage 2 and stage 3 pressure ulcers during his two-night stay at the hospital. V4 said her assessment of R4's wound on June 11, 2026, showed that R4 had a stage 3 left front axilla MDRPU (Medical Device Related Pressure Ulcer/injury) and a stage 2 right front axilla MDRPU, and they were both present upon R4's readmission to the facility on June 10, 2026. V4 said wound treatment began immediately after the assessment on June 11, 2026. V11(Wound Care Physician) also assessed R4's wound the same day.
