| (X4) ID PREFIX TAG | SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information) |
|---|---|
| F 0689<br><br>Level of Harm - Actual harm<br><br>Residents Affected - Few | Ensure that a nursing home area is free from accident hazards and provides adequate supervision to prevent accidents.<br><br>46506<br><br>Based on observation, interview, and record review, the facility failed to ensure one resident (Resident #3), out of eight sampled residents, was safely transferred from a wheelchair to bed with a mechanical lift. Staff used a lift sling with two torn attachment loops for the transfer, hooking the sling to the lift with the two attachment loops below the torn loops. During the transfer, the lower loops tore, causing the resident to fall from the lift. The resident sustained a laceration to the back of his/her head which required treatment in the emergency room . The facility census was 55.<br><br>On 4/16/25 at 12:55 P.M., the administrator was notified of the past noncompliance which occurred on 4/8/25. On 4/8/25, the administrator became aware of the resident's fall from a mechanical lift during a transfer. Upon discovery, the facility investigated and notified the appropriate parties. Staff reviewed the mechanical lift policy, were educated on what to look for on a lift sling, including frays, tears, and worn areas, when to report the issues found on the sling, and how to exchange it with a new sling located at the Director of Nursing's office or nurses' station on the weekends. The restorative aide started weekly audits of the lift slings to monitor of frays, tears, etc. then reports the findings to the Director of Nursing and/or Administrator. The deficiency was corrected on 4/10/25.<br><br>Review of the facility's Mechanical Lift policy, undated, showed the following:<br><br>-A mechanical lift is used appropriately to facilitate transfers of residents;<br><br>-Lower lift and place hooks in the appropriate holes of the lift sheet;<br><br>-Using lever gently raise and move resident to destination;<br><br>-Lower resident and position comfortably.<br><br>1. Review of the Drive Medical Full Body Patient Sling Owner's Manual (for the mechanical lift), dated 1/15/16, showed the following:<br><br>-The maximum weight capacity was 600 pounds;<br><br>-Inspect patient slings for wear prior to each use;<br><br>(continued on next page) |
