F 0658 Level of Harm - Minimal harm or potential for actual harm Residents Affected - Few	Ensure services provided by the nursing facility meet professional standards of quality. Based on review of the Pennsylvania Nursing Practice Act and clinical records, as well as staff interviews, it was determined that the facility failed to ensure that residents received care and treatment in accordance with professional standards of practice, by failing to follow physician's orders to hold blood thinner and anticoagulant medications prior to a scheduled surgical procedure resulting in delayed surgery for one of seven residents reviewed (Resident 7). Findings include: The Pennsylvania Code, Title 49, Professional and Vocational Standards, State Board of Nursing, 21.11 (a)(1)(2)(4) indicated that the registered nurse was to collect complete and ongoing data to determine nursing care needs, analyze the health status of individuals and compare the data with the norm when determining nursing care needs, and carry out nursing care actions that promote, maintain and restore the well-being of individuals. A quarterly Minimum Data Set (MDS) assessment (a mandatory assessment of a resident's abilities and care needs) for Resident 7, dated June 4, 2026, indicated that the resident was cognitively intact, required set up assistance to supervision with most care needs, received an anticoagulant (medication that thins the blood) and antiplatelet (medication that prevents blood clots) medication and had a diagnosis of breast cancer. Physician's orders for Resident 7, dated December 14, 2023, included orders for the resident to receive 5 milligrams (mg) of Eliquis (an anticoagulant medication) twice daily . Physician's orders for Resident 7, dated May 2, 2025, included orders for the resident to receive 75 mg of Plavix (an antiplatelet medication) daily. A surgical consult note for Resident 7, dated June 10, 2026, revealed that the resident was scheduled for a partial mastectomy (removes only the cancerous tumor and a surrounding margin of healthy tissue) on July 10, 2026. A physician's note for Resident 7, dated June 11, 2026, revealed that the resident was seen by the physician for follow-up and pre-operative medical evaluation for a planned right breast surgical intervention in the setting of recently diagnosed invasive breast carcinoma (cancer). She was medically cleared to proceed with planned surgical intervention from a medical standpoint with orders to hold the resident's Eliquis and Plavix five days prior to the procedure. A nursing note for Resident 7, dated July 8, 2026, at 6:30 p.m. a nurse practitioner called from cardiology called to confirm the resident was cleared for surgery on Friday. The nurse practitioner verified that he would be sending the surgical center the information as well with the clearance. A nursing note for Resident 7, dated July 9, 2026, at 10:27 a.m. revealed that the resident was scheduled for breast surgery on July 14, 2026, and new orders were received to hold the resident's Plavix and Eliquis starting today. Interview with Resident 7 on July 9, 2026, at 11:42 a.m. revealed that the resident was scheduled for surgery tomorrow for a lumpectomy for breast cancer. She indicated that she had waited six months for this appointment and it was canceled because they did not hold her Eliquis and Plavix. She indicated that the nurse gave her Eliquis this morning and she told the nurse she was not supposed to get the medication, and it was to be held due to her surgery that was scheduled on Friday, July 10, 2026. The nurse told her it was not listed on the Medication Administration Record (MAR) to hold the (continued on next page)		

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

F 0658 Level of Harm - Minimal harm or potential for actual harm Residents Affected - Few	medications. She stated that now her surgery was rescheduled for next Tuesday, July 14, 2026. The resident stated , I just want the cancer out of me and now I have to wait longer. Interview with Licensed Practical Nurse 1 on July 9, 2026, at 12:34 p.m. confirmed that there were orders in her chart now to hold her Eliquis and Plavix and she held it this morning. She stated that the resident's surgery was changed, and she does not know why. Review of the Resident 7's MAR for July 2026, revealed that the resident received her Eliquis and Plavix from July 1 through July 8, 2026. There was no documented evidence that the orders were transcribed to hold the resident's Eliquis and Plavix for the five days prior to the scheduled surgery on July 10, 2026. Interview with the Director of Nursing on July 9, 2026, at 2:52 p.m. confirmed that Resident 7's Eliquis and Plavix should have been held five days prior to her scheduled surgery on July 10, 2026, as ordered by the physician on June 11, 2026, and they were not. She confirmed that the surgery had to be rescheduled due to the medications not being held. 28 Pa. Code 211.12(d)(1)(3)(5) Nursing Services.
